BARN DOOR
96 Series

DIVIDERS by COXUSA's newest interior door system is a one-of-a-kind contemporary barn door that showcases a uniquely engineered, custom-built foam-filled wood door with high-grade **thermofoil** surface that offers resistance to corrosion, scratches and ultra-violet rays.

The use of **laminated strand lumber (LSL)** panel stile and rail construction provides for a door design that ensures for a warp resistant frame. The top of the door (17") is made of solid LSL to specifically accept barn door hardware. This contemporary wood door is 2" wider and 1" taller than finished opening.

This contemporary wood barn door system, a fusion of carefully curated wood door designs with modern barn door hardware in steel and stainless steel alloy with various finishes, presents style solutions and options that are truly unique to the aesthetics and design requirements of today's oft-specific interiors.
